## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1,2,5,7-15,17-23 are allowed over the prior art of record.

2. The following is an examiner's statement of reasons for allowance:

As per the independent claims, the claim limitations pertaining to determining an automatic volume control based on a weighting of a near end ambient noise level, in combination with and automatic gain control and a weighted dynamic range compression, and applying this to a far end signal, is not explicitly taught by the prior art of record. Furthermore it would not have been obvious to one of ordinary skill in the art of audio signal processing to modify the teachings of the prior art of record to obtain the recited limitations of the independent claims as noted above.

As an example of the prior art of record, Heitkamper (EP06000164A1) teaches a method of controlling volume of a received signal (Page 2, 1<sup>st</sup> col., 2<sup>nd</sup> paragraph, shows volume control to keep the signal above a nominal value and below a second nominal value) using an expansion gain from P1 to P2 (page 13, fig. 6); a compression between points P2 to P3 in figure 6; and page 5 col. 1 lines 40-44; page 5, col. 2 lines 7-9; and a total gain from P1 to P3, (Fig. 6, page 5 col. 1 lines 35-44; col. 2 lines 1-10). However, Heitkamper (EP06000164A1) does not explicitly teach the claim limitations of the independent claims as noted above.
